Internal Server Error

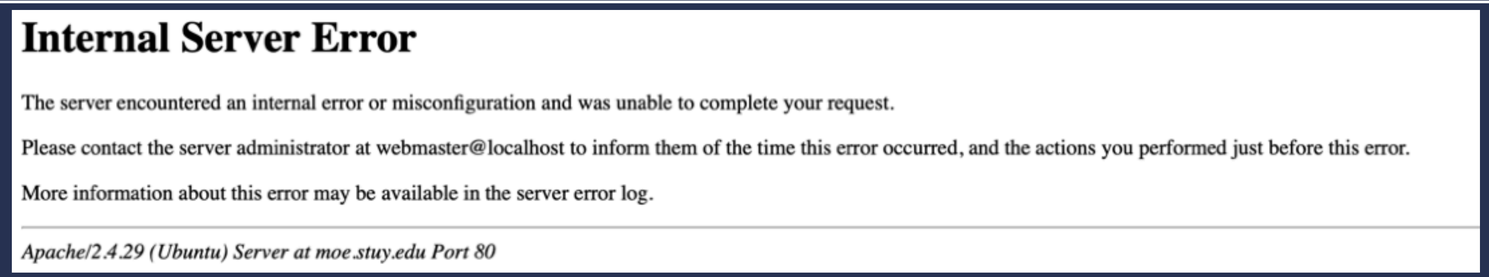
The server encountered an internal error or misconfiguration and was unable to complete your request.

Please contact the server administrator at webmaster@localhost to inform them of the time this error occurred, and the actions you performed just before this error.

More information about this error may be available in the server error log.

Apache/2.4.29 (Ubuntu) Server at moe.stuy.edu Port 80

Aim: How we use python to generate web pages?



Internal Server Error - How to fix?

1. apache2 doesn't have the correct permissions to run the program.
   Check permissions using `$ ls -l` . The **other** permissions should be: `r--x`

2. The python program is not configured to run on its own.
3. The python program has an error when run.
   Both 2 and 3 should be mitigated by testing that the program runs on its own via a shell, if that works, they are not your problem.

4. The python program takes too long to run (~2 minutes)
   Once again, running via the command line should allow you to rule this out.
