Aim: How do HTML forms work?

Example form:

```
<form action="foo.py" method="GET">
  Who are you?: <input type="text" name="who">
  <select name="what">
    <option value="o0">this</option>
    <option value="o1">that</option>
  </select>
  <input type="submit">
</form>
```
