

Aim: How can we use matplotlib to make graphs?

matplotlib - Basic Usage - Graphing

```
plt.scatter( xdata, ydata, scale )
```

Create a scatter plot.

xdata is a list of x values and ydata is a list of y values.

scale is scale factor for the dots.

If scale is a single number, each dot will be scale pixels large.

If scale is a list, it should contain the size of each dot.
