

## Aim: How do we work with dictionaries?

Write a function that takes a list of numbers as a parameter and returns a dictionary where each key is one of the numbers and the associated value is the number of times that number appears in the list. (solution on next slide)

example:

```
get_frequencies( [6, -23, 8, 9, -23, 8, 5.4, 6, 9, -23] )
```

==>

```
{6: 2, -23: 3, 8: 2, 9: 2, 5.4: 1}
```
