

Aim: How do we work with dictionaries?

```
def get_frequencies(g):  
    frequencies = {}  
    for thing in g:  
        if thing in frequencies:  
            frequencies[thing] += 1  
        else:  
            frequencies[thing] = 1  
    return frequencies
```
