

Aim: How do we write to files?

Open and file creation

If you open a file using `'w'`, the file will be created if it does not exist.

If the file does exist, the contents will be erased (even if you don't call write).

You can use `'a'` instead of `'w'` when opening a file. This will open a file for appending. If the file does not exist, it will be created, if it does exist, the write function will append to the end of the file.

Aim: How do we write to files?
