

Aim: How do split and join work?

Exercises (answers on next slide):

0. Use `split` to determine the number of words in a string.

1. Write a function that takes a list of lists of strings, and returns a string. Each sublist should be on a new line, and each element in each list should be separated by a `','`.

example input: `[['mykolyk', 'brooks', 'holmes'],
['cocoros', 'kats', 'butler']`

example output: `'mykolyk,brooks,holmes
cocoros,kats,butler'`

Aim: How do split and join work?
