

# Aim: How does the for loop work?

## Dylan Says

Try the following in a python shell. (When typing a multi-line structure like `if` or `for`, hit enter after the `:` and then continue on the next line. In the Thonny shell, you will automatically be indented on the next line. Hit enter twice when you are done)

```
s = 'Welcome to the world of tomorrow'
for c in s:
    print(c)
```

```
g = ['Welcome', 'to', 'the', 'world']
for e in g:
    print(e)
```

# Aim: How does the for loop work?
