

Aim: How do split and join work?

Exercises:

0. `>>> len(s.split(' '))`

```
1. def de_list(g):  
    newg = []  
    for subg in g:  
        newg.append( ','.join(subg) )  
    return '\n'.join(newg)
```
