

ss.joining

‘.join g0’

‘-’.join(g1)

## Aim: How do split and join work?

join

String method that creates a string from a list.

syntax

```
s.join( g )
```

Examples

```
g0 = ['i', 'love', 'computer', 'science!']
```

```
' '.join(g0) ==> 'i love computer science!'
```

```
g1= ['john', 'paul', 'george', 'ringo']
```

```
'-'.join(g1) ==> 'john-paul-george-ringo'
```
